

ALIDA BIOSCIENCES....

HYELIN CHOI

Research Associate/Associate Scientist Applicant

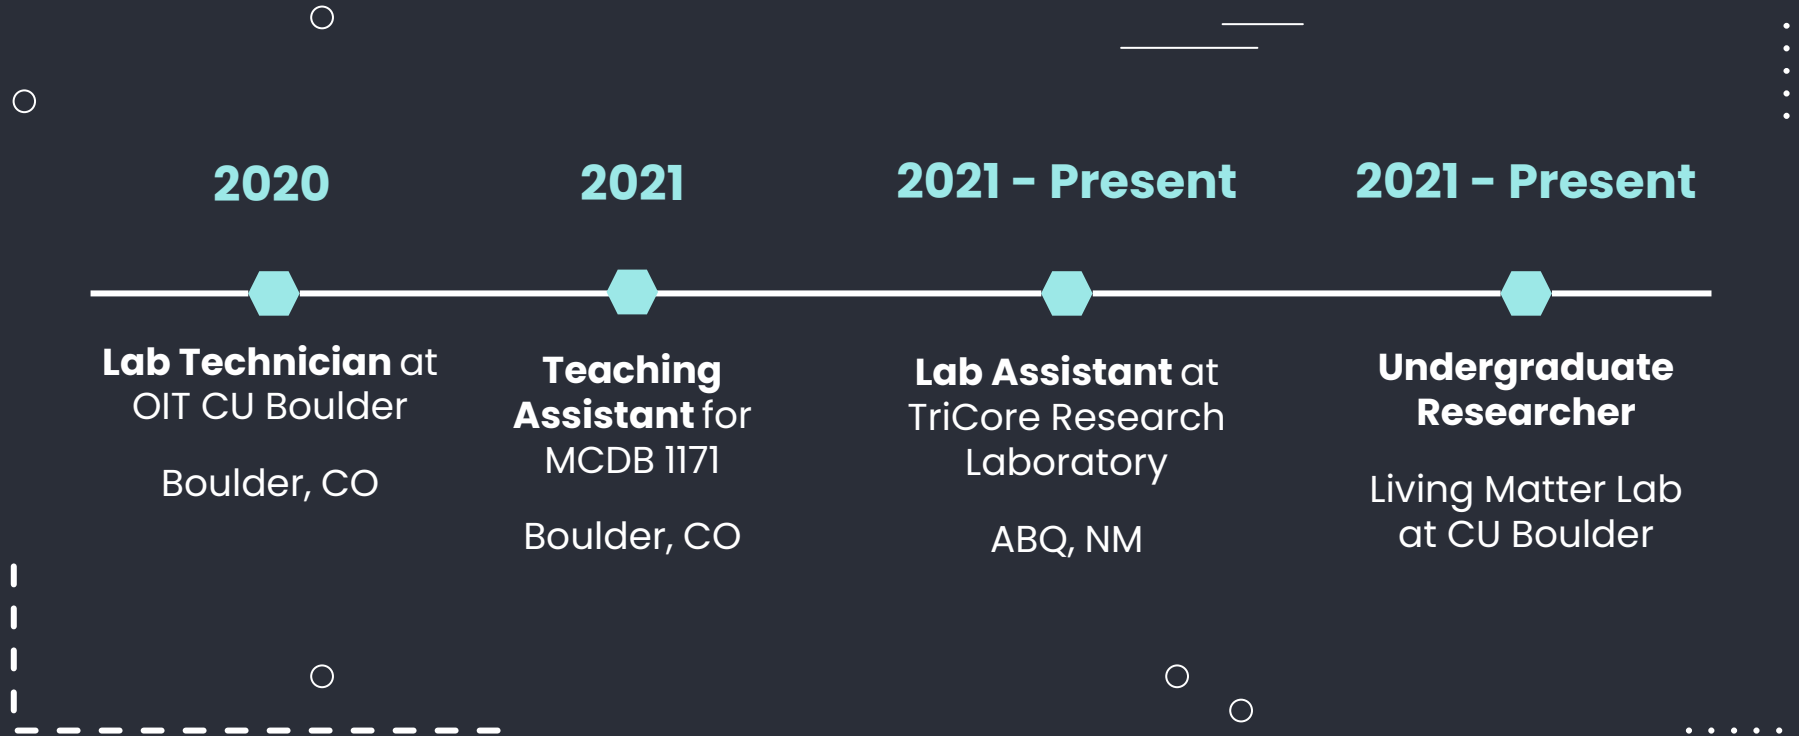

Hyelin Choi

- Hometown: Albuquerque, NM
- Senior in MCDB at CU Boulder
- Enjoy cooking & drawing

RELEVANT EXPERIENCES

VOLUNTEER WORK

BIODESIGN RESEARCH

Albiivirbio fischeri

RESEARCH

Living Matter Lab @ CU Boulder

ENRICHSEQ

Finding Therapeutic Phages using
Enrichment

- Based on Dedrick et al 2019 antibiotic resistance
- Computation method to create efficient alternative to 1 by 1 phage testing
- Theory – most virulent phages aggressively overgrow with target bacteria

CURRENT METHOD

Phage A

Phage B

Phage C

Pathogen X

Phage A
DID NOT WORK

Pathogen X

Phage C
DID WORK

Problem: ad hoc 1 v 1 testing

THEORY MECHANISM

EnrichSeq Process

1st Add Phage

2nd Add Bacteria

3rd Sequence

- (1) $t = 0$
- (2) $t = \text{final}$

$t = 0$

$t = 1$

$t = 2$

$t = \text{FINAL}$

Validation & Iteration

Troubleshoot

Caveats

- No access to qPCR
- No consistent pos/neg controls
- No consistent M.Smeg
- Gel streaks/ unreliable results
- Human errors from two different researchers
- Time restriction due to week commitment for each enrichment

EnrichSeq Troubleshoot

Nanodrop test primers
for concentration

Perform PCR on cocktail,
lysates, M.Smeg

Use new Taq
Polymerase

Reorder primers, possibly
new phages

Going back in Lab Notebook:
Taq could be dead, DNA
needs better purification...

A blurred background of a laboratory setting featuring various glassware such as Erlenmeyer flasks, beakers, and a small vial, some containing liquids. A dashed white line forms a rectangular frame in the upper right corner of the image.

Thank you!
